Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 5, 28, 29 drawn to a combination stock material and bearing, classified in Class 384, subclass 121.

Group II: Claims 1-4, 27, 30 drawn to a stock material subcombination, classified in Class 428.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination (see evidence claim 5) does not require phosphorous (see evidence claim 3). The subcombination has separate utility such as in food manipulating instrument).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
